-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 13, 17-18 and 22-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Ogle et al. (U.S. Patent No. 5817024).

- With respect to claims 13, 17-18 and 22-23, Ogle teaches a method for using an ASIC that provides a first level of signal channel reduction and a second level of signal channel reduction (e.g. Fig. 7 shows the 128 signals from 10 to block 20 and to block 500 with 16/8 channel), the method comprising: determining a number of signal channels for use in a data path (e.g. the number from block 10 in fig. 7 is determining); and configuring the ASIC to provide the determined number of signal channels by selecting one or more components in the ASIC to provide the first or second level of signal channel reduction (see col. 5, lines 10-40); and operating circuitry on the ASIC as a cross-point switch to increase the number of channels from the ASIC to one or more beam formers (e.g. Fig. 5 show the switching function at block 412 and sum to second level); implementing two beam formers in communication with the data path; and operating the two beam formers and a transducer array to form multiple receive beams (see col. 4, lines 45-50).

Allowable Subject Matter

Claims 4-9, 15-16, 19-21, 24, and 36-40 are allowed.

Response to Amendment

Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to PHUC TRAN whose telephone number is (571)272-3172. The examiner can normally be reached on 8-5.
